Introduction, by John C. Dernbach.....	1
I. The Paris Agreement and the Urgency of Climate Change.....	2
II. U.S. Technical and Policy Pathways to Deep Decarbonization.....	7
III. Why Deep Decarbonization Is in America’s Interest	12
A. Public Health and Welfare.....	12
1. Public Health Risks of Climate Change.....	13
2. Public Health Benefits of Reducing GHG Emissions.....	14
3. Economic Opportunities and Economic/Property Risks	14
B. National Security.....	15
C. Food Security.....	16
D. American Values	16
IV. The Importance of Identifying U.S. Legal Pathways to Deep Decarbonization.....	17
V. Plan of This Book	18

PART I — CONTEXT

Chapter 1 — <i>Technical and Economic Feasibility of Deep Decarbonization in the United States</i> , by James H. Williams, David Ismay, Ryan A. Jones, Gabe Kwok, and Ben Haley.....	21
I. Introduction	21
II. Background.....	22
III. Objectives	23
IV. Methods.....	24
V. Decarbonization Strategies	26
VI. Scenarios.....	26
VII. Main Findings	28
VIII. Key Benchmarks	30
IX. Sectoral Transitions	30
X. Mitigation of Non-Energy and Non-CO ₂ GHGs.....	33

XI. Policy Challenges	34
XII. Improving Policymaking	36
XIII. Conclusion.....	38
Appendix A. Figures	39
Appendix B. Tables.....	65
 PART II — CROSS-CUTTING APPROACHES TO REDUCING EMISSIONS 	
Chapter 2 — <i>Carbon Pricing</i> , by Shi-Ling Hsu.....	70
I. Introduction	70
II. Carbon Pricing	72
A. Where in the World Is Carbon Priced?.....	73
1. Cap-and-Trade Programs.....	73
2. Carbon Taxation	75
B. Emissions Reductions From Carbon Pricing	76
III. Legal Issues.....	78
A. Executive Action Issues	78
B. Carbon Taxation Issues	78
C. Cap-and-Trade Issues	79
D. Trade Protection Issues	80
IV. A Carbon Tax Option.....	80
A. Level of Taxation	81
B. Point of Taxation	82
C. Revenue Options	82
1. Economic Efficiency	83
2. Wealth Redistribution	83
3. Climate Policy Spending.....	85
4. Revenue Options Generally.....	85
D. The Effect of a Carbon Tax Option	86
V. Conclusion.....	86
Chapter 3 — <i>Behavior</i> , by Michael P. Vandenbergh and Paul C. Stern	87
I. Introduction	87
II. The Core Elements of the DDPP.....	90
III. The Framing Challenge	91
A. Framing the Sources of Demand.....	91
B. Framing the Energy Terminology.....	92
IV. The Role of Behavior in the DDPP	93

A. Behavior in the DDPP Efficiency Assumptions.....	93
B. Behavior in the Four DDPP Pathways.....	96
V. Laws, Policies, and Programs to Promote Behavior Change.....	97
A. The Plausibility of Behavior Change Initiatives for Climate Mitigation.....	98
B. Specific Laws, Policies, and Programs to Achieve Deep Decarbonization.....	98
C. Design Principles for Changing Behavior.....	99
D. Household Equipment.....	100
1. Technology Uptake.....	100
2. Technology Use.....	103
3. Design Principles.....	103
E. Buildings.....	103
F. Motor Vehicles.....	105
G. Ways Forward.....	106
VI. Beyond the DDPP Analysis.....	107
A. Reducing Demand for Energy Services.....	108
B. Enabling Lifestyle Transitions That Lower Emissions.....	109
VII. Conclusion.....	110
 Chapter 4 — <i>Technological Innovation</i> , by Gary E. Marchant.....	 111
I. Introduction.....	111
II. Technological Innovation Is Essential for Deep Decarbonization.....	112
III. The Case for Legal Intervention.....	114
IV. Legal Intervention Tool Box for Deep Carbonization.....	115
A. Regulatory Standards for Carbon Reduction.....	115
B. Expedited or Relaxed Approval Pathways for Decarbonization Technologies.....	116
C. Carbon Taxes.....	116
D. Tradable Permits.....	117
E. Technology Mandates.....	117
F. Government Procurement.....	118
G. R&D Funding.....	118
H. Subsidies.....	119
I. Incentive Programs.....	119
J. Intellectual Property.....	119
K. Competitions/Prizes.....	120
L. Land Use.....	120
M. Private Governance/Soft Law Approaches.....	120
V. Key Challenges.....	121

A.	Costs and Feasibility.....	121
B.	Timing.....	122
C.	Fairness.....	122
D.	Incremental Versus Radical Change.....	122
E.	Technological Uncertainty.....	123
F.	Coordination and Complementary Technologies	124
G.	Picking Winners and Losers.....	124
H.	Unintended Consequences	125
I.	Reflexivity.....	125
J.	Jurisdictional Coordination	126
K.	Work Force.....	126
VI.	Conclusion.....	127
Chapter 5 —	<i>Financing Large-Scale Projects</i> , by Robert Freedman, Monica Lamb, and Claire Melvin.....	129
I.	Introduction	129
II.	Challenges in Financing Carbon-Reducing Assets	131
A.	High Up-Front Capital Costs	131
B.	Technology Risk	132
C.	Variability of Renewable Energy Generation	133
D.	Inefficiency of Tax Incentives for Power Plant Development.....	133
E.	Physical Constraints on Ownership of Behind-the-Meter Renewable Electricity Generation	134
F.	Long Development Time Lines for Renewable Power Plants.....	134
G.	Inadequate Transmission Infrastructure	135
III.	Legal Pathways.....	135
A.	Pathways to Enabling Greater Up-Front Capital Investments and Increasing the Amount of Available Capital.....	135
1.	PTC.....	136
2.	ITC	137
3.	State Tax Credits, Exemptions, and Deductions.....	138
4.	Direct Loan, Grant, and Rebate Programs	138
5.	Green Banks	140
6.	Green Bonds.....	141
7.	Tax-Advantaged Structures	142
8.	Mandates Driving Decarbonization Investment.....	142
B.	Pathways to Addressing Technology Risk	143
C.	Pathways Addressing the Variability of Renewable Energy Generation	144
D.	Pathways Addressing the Inefficiency of Tax Credits.....	145

E. Pathways to Addressing the Constraints on Behind-the-Meter Renewable Power Generation	146
F. Pathways to Streamline the Permitting and Siting Processes.....	146
G. Pathways to Developing Transmission Infrastructure	146
IV. Conclusion.....	147
 Chapter 6 — <i>Financing at the Grid Edge</i> , by C. Baird Brown.....	148
I. Introduction	148
II. The Case for Action at the Edge.....	149
A. The Energy Revolution at the Grid Edge	150
B. Where the Grid Meets the Edge.....	151
C. Decarbonization Investment Today	152
D. Credit Quality	153
1. Capacity and Compliance	153
2. Financial Sustainability	153
3. Collateral.....	154
E. Legal Action on Grid-Edge Finance.....	155
III. The Legal Authority to Generate, Distribute, and Sell Energy.....	155
A. The Utility Regulation Hurdle.....	155
B. Statutory Exceptions and Workarounds.....	156
C. Other Forms of Entities.....	157
1. Cooperative and Municipal Utilities.....	157
2. Thermal Utilities.....	157
3. Customer Aggregations	158
D. Recommendation: New Grid-Edge Regulatory Models.....	159
1. Local Generation and Distribution Projects	159
2. Combined Virtual Metering.....	159
3. Carbon Conditions	159
4. Federal Policy Directives to States.....	160
IV. Services From and to the Grid Edge.....	160
A. Sales to RTOs.....	160
1. Current RTO Markets	160
2. Recommendation: Improved Market Participation Models	161
B. Services for and From Distribution Companies	161
1. Utility Purchase Programs Are Rare	161
2. Recommendation: Getting the Tariffs Right.....	163
3. Recommendation: Utility-Private Partnerships.....	164
4. Recommendation: Support the Utility of the Future.....	165

C.	Recommendation: Subsidies Should Not Interfere With Markets	166
V.	Grid-Edge Finance	168
A.	New Building Efficiency	168
1.	Legal Performance Requirements	168
2.	Private Requirements	169
3.	Lending Market Process	169
4.	Tax-Exempt Bonds	170
5.	Recommendation: Change Construction and Lending Industry Culture	170
B.	Energy-Efficiency Retrofits	170
1.	Guaranteed Energy Savings Contracting	171
2.	Financing Retrofits	171
3.	Other Financing Approaches	172
4.	Recommendation: Help Retrofit Markets Grow	173
C.	Generation, Storage, and Private Activity Bonds	173
1.	Customer Ownership	173
2.	Third-Party Ownership	174
3.	Private Activity Bonds	175
D.	Pooled Financing and Securitization	175
1.	Securitization	176
2.	Pooled Bonds	176
3.	Recommendation: A Federal Alternative	176
E.	Information, Credit, and Carbon	176
1.	Recommendation: Availability of Utility Customer Information	177
2.	Recommendation: Utility Grid Mapping	177
3.	Recommendation: Performance of Energy Projects and Energy Borrowers	177
4.	Recommendation: Green Investments	178
F.	Performance Contracting	178
1.	Importance	178
2.	Recommendations	179
G.	Green Banks and Sustainable Energy Utilities	179
1.	Growing Role	179
2.	Recommendations	180
H.	Recommendation: Help Bring Low-Income Energy Users Into the Market	180
VI.	Energy Rights	181
A.	Energy Justice	181
B.	An Energy Bill of Rights	181
VII.	Conclusion	182

Chapter 7 — <i>Materials Consumption and Solid Waste</i> , by Michael Burger	183
I. Introduction	183
II. Characterization of the Circular Economy and Its Climate Benefits	185
A. A Brief History of the Circular Economy	185
B. The Effect of the Circular Economy on GHG Emissions	185
III. Legal Techniques for a Circular Economy	186
A. Regulatory Interventions	187
1. Existing Approaches: Foreign Country Legislation	187
2. State and Local Laws in the United States	188
B. Research and Development: Materials Innovation	191
C. Corporate Governance	191
IV. Legal Pathways to a Circular Economy in the United States	192
A. Regulatory Interventions at the Federal, State, and/or Local Level	193
B. Research and Development	194
C. Corporate Governance	194
D. Managing Environmental Risks of Specific Materials	195
V. Conclusion	195
 Chapter 8 — <i>International Trade</i> , by Elizabeth Trujillo	 197
I. Introduction	197
II. Policy Tools to Promote Deep Decarbonization	198
A. FITs	199
B. LCRs	199
C. Tax Schemes and BTAs	199
D. Subsidies	200
E. Eco-Labeling	200
III. A Primer on International Trade Law and Deep Decarbonization	200
A. Discrimination in GATT: Articles I and III	201
B. Exceptions to GATT: Article XX	201
C. The SCM Agreement	202
D. The TBT Agreement	203
IV. Trade Law and Decarbonization Policy Conflicts	203
A. LCRs	203
1. WTO Case Law	203
2. Recommendations Concerning LCRs	204
B. Border Tax Adjustments	206
1. BTAs and GATT Article I	206

- 2. BTAs Under GATT Article III 207
- 3. BTAs and GATT Article XX..... 207
- 4. BTAs and the SCM 208
- 5. Recommendations for BTAs..... 208
- C. FITs..... 209
 - 1. Relevant WTO Case Law 209
 - 2. Recommendations for FITs 210
- D. Eco-Labeling..... 210
 - 1. Use of Eco-Labeling for Decarbonization..... 210
 - 2. Recommendations for Eco-Labeling 211
- V. Deep Decarbonization in Preferential Trade Agreements 211
 - A. NAFTA..... 212
 - B. The TPP..... 213
 - C. The CETA..... 214
 - D. Recommendations 214
 - 1. Recommendations for NAFTA Renegotiations 214
 - 2. Recommendations for Other Preferential Trade Agreements 215
- VI. Conclusion 215

PART III — ENERGY EFFICIENCY, CONSERVATION, AND FUEL SWITCHING IN BUILDINGS AND INDUSTRY

- Chapter 9 — *Lighting, Appliances, and Other Equipment*, by Kit Kennedy 217
 - I. Introduction 217
 - II. Federal Energy-Efficiency Standards: Regulatory Framework..... 220
 - A. History of the Federal Energy-Efficiency Standards Program 220
 - B. Current Status: Trump Administration..... 222
 - C. The DOE Energy-Efficiency Standards Rulemaking Process..... 224
 - D. Carbon Benefits and Co-Benefits of Federal Energy-Efficiency Standards 226
 - E. Benefits of Energy-Efficiency Standards for Low-Income Consumers 226
 - F. Federal Preemption and State Energy-Efficiency Standards..... 227
 - 1. State Efficiency Standards for Products That Are Not Federally Regulated 227
 - 2. Exemptions From EPCA’s Federal Preemption Provisions..... 228
 - III. Legal Pathways for Scaling Up Appliance and Product Energy Efficiency 230
 - A. Energy-Efficiency Legal Pathways: Federal Government 231
 - 1. Overarching and Complementary Federal Energy-Efficiency Legal Pathways..... 231
 - 2. Federal Energy-Efficiency Appliance and Equipment Standards: Legislative and Regulatory Pathways 233
 - 3. Policies to Accelerate Turnover and Penetration of Energy-Efficient Appliances 239
 - B. Energy-Efficiency Legal Pathways: States..... 240

1. Overarching and Complementary State Energy-Efficiency Legal Pathways	240
2. State Energy-Efficiency Appliance and Equipment Standards Legal Pathways.....	243
C. Energy-Efficiency Legal Pathways: Cities and Localities	245
D. Energy-Efficiency Legal Pathways: Industry, Businesses, and Utilities.....	245
1. Embrace Sustainability	245
2. Embrace Energy-Efficiency Private Governance Standards	246
IV. Legal Pathways for Increasing Energy Efficiency in Lighting, Consumer Electronics, Computers, and Data Centers, and in the Industrial and Commercial Sectors	246
A. Lighting Efficiency.....	246
1. Federal Lighting Efficiency Legislation and Regulation	247
2. Federal Lighting RD&D	249
3. Federal Voluntary and Labeling Programs	250
4. Model and State Building Codes	250
5. State Lighting Efficiency Legislation and Programs	250
6. State and Federal Lighting Incentive Programs	251
B. Computer and Data Center Energy Efficiency	251
1. Computer Efficiency	251
2. Data Center and Computer Server Efficiency	252
C. Industrial and Commercial Efficiency	253
1. Potential for Industrial Energy Efficiency.....	253
2. Barriers to Industrial Energy Efficiency.....	254
3. Approaches to Improving Industrial Energy Efficiency.....	254
V. Conclusion.....	255
Chapter 10 — <i>New Buildings</i> , by Lee Paddock and Caitlin McCoy	256
I. Introduction	256
II. Background.....	256
III. Pathways to Deep Decarbonization in the United States	258
IV. Green Building Approaches.....	259
A. LEED and Energy Star for Buildings.....	259
B. ZEBs	260
V. Energy-Efficiency Technologies for Deep Decarbonization of New Buildings.....	262
VI. U.S. Approaches to Improve the Energy Performance of New Buildings	263
A. Federal Approaches to Improving Energy Performance in New Buildings	263
B. State and Local Approaches to Improving Energy Performance in New Buildings	265
VII. EU Approaches to Improve the Energy Performance of Buildings	268
A. Implementation of the EPBD and Building Policies in the Netherlands.....	270
B. Implementation of the EPBD and Building Policies in Sweden	271

VIII. Recommendations	271
A. Federal Government.....	272
B. State Governments.....	273
C. Local Governments.....	274
D. Private Initiatives	275
IX. Conclusion.....	276
 Chapter 11 — <i>Existing Buildings</i> , by James Charles Smith.....	 277
I. Introduction	277
II. Existing Buildings and GHG Emissions.....	278
A. Contribution of Buildings to Overall GHG Emissions	278
B. The DDPP	279
C. Other Measures and Benefits	280
III. Legal Pathways for Deep Decarbonization: Energy Audit Programs	281
A. The Value of Energy Audits.....	281
B. Voluntary Programs.....	282
C. Mandatory Programs.....	282
1. New York City Benchmarking Plan	282
2. California Building Energy Consumption Records	283
D. Disclosure Requirements at Time of Sale or Rental	283
1. Residential Buildings—Austin, Texas, Energy Conservation Audit and Disclosure.....	284
2. United Kingdom Energy Performance Certificate.....	285
E. Recommendations	285
IV. Legal Pathways for Deep Decarbonization: Mandatory Retrofit Laws	286
A. San Francisco—Residential Energy Conservation Ordinance	287
B. United Kingdom EPC—Rental Properties.....	288
C. Recommendations	288
V. Legal Pathways for Deep Decarbonization: Government Buildings	290
A. Federal Government.....	290
1. Legislation	290
2. Executive Branch	291
3. GSA Sustainability Plan FY 2011-2016	292
B. State and Local Governments	292
C. Recommendations	292
VI. Legal Pathways for Deep Decarbonization: Voluntary Certification Systems	293
A. The Development of Green Building Certifications	293
B. Recommendations	294

VII. Legal Pathways for Deep Decarbonization: Fuel Switching	294
A. Switching From Fossil Fuels to Electricity	294
B. Other Fuels.....	295
C. Recommendations	296
VIII. Legal Pathways for Deep Decarbonization: Financing Mechanisms	297
A. EEMs.....	297
B. Rehabilitation Mortgages	298
C. PACE Programs	298
D. Recommendations	299
IX. Conclusion on How to Reach 80% Reduction	300
Chapter 12 — <i>Industrial Sector</i> , by Gregg P. Macey	301
I. Introduction	301
II. Industrial-Sector Carbon Emissions.....	303
A. Industry Role in Raising and Stabilizing World Temperatures.....	303
B. Industrial Carbon Emissions by Subsector	305
1. Refining and Chemicals	305
2. Pulp and Paper	306
3. Food Processing	307
4. Iron and Steel and Other Primary Metals.....	307
5. Cement and Lime Production.....	308
6. Other Sectors.....	308
III. Legal Pathways to Energy and Emissions Efficiency.....	308
A. Carbon Pricing	309
B. Ad Hoc and Comprehensive Regulatory Backstops	311
1. Sectoral Approach	311
2. A More Comprehensive Carbon Price.....	317
C. Subsidy and Private-Law Solutions.....	318
D. Further Pathways: Material Efficiency and Carbon Management.....	320
IV. Equity and Employment.....	325
V. Conclusion.....	326
 PART IV — ENERGY EFFICIENCY, CONSERVATION, AND FUEL SWITCHING IN TRANSPORTATION 	
Chapter 13 — <i>Transforming Transportation Demand</i> , by Trip Pollard.....	328
I. Introduction	328
II. The Challenge: What Needs to Be Achieved by 2050	329
A. Transportation: The Largest Source of GHG Pollution.....	329

B.	Potential to Curb Emissions by Shifting Transportation Demand	331
1.	DDPP Analysis	331
2.	Analyses Addressing Transportation Demand.....	332
III.	Solutions: Legal and Policy Options for Moving Forward.....	333
A.	Reorient Transportation Planning.....	334
B.	Reduce Driving While Still Using Motor Vehicles	336
1.	Maximize Road System Efficiency.....	336
2.	Reduce Subsidies and Improve Price Signals	337
3.	Flexible Vehicle Trips	339
4.	Shared Mobility	340
5.	Autonomous Vehicles	342
C.	Provide and Promote Alternatives to Driving.....	343
1.	Funding, Pricing, and Incentives.....	343
2.	Increasing Efficiency and Effectiveness.....	344
3.	Designing and Retrofitting Streets	345
D.	Link Transportation and Land Use	346
IV.	Moving Forward	348
A.	Complementary Efforts and Cumulative Effects.....	348
B.	Maximizing Co-Benefits.....	349
V.	Conclusion: Building on Momentum for Change	351
Chapter 14 — <i>Light-Duty Vehicles</i> , by Amy L. Stein and Joshua P. Fershée.....		353
I.	Introduction	353
II.	The Role of LDVs in Decarbonization	354
A.	LDV Primer.....	354
1.	ICEs	355
2.	EVs, Hybrids, and Plug-In Hybrids	355
3.	Hydrogen.....	356
B.	LDVs and GHG Emissions.....	356
III.	Existing Legal Pathways to Achieve LDV Decarbonization	357
A.	Fuel Economy Standards.....	358
B.	Emissions Standards.....	359
C.	Fiscal Incentives	360
D.	Barriers to AFV Development.....	361
1.	Cost.....	361
2.	Actual and Perceived Infrastructure Deficiencies	362
3.	The Alternative Vehicle Challenge: Public Perception and Preferences	363

4. Misalignment Between Financial Motivations and AFV Deployment	366
IV. Developing Legal Pathways to Achieve LDV Decarbonization	366
A. Promoting a Reduced-Carbon LDV Fleet	367
1. Develop Infrastructure Pathways	367
2. Coordinate the Electric Grid With Transportation	371
3. Lower Costs	373
4. Tighten Fuel Economy and Emissions Standards	376
5. Integrate Autonomous Vehicles	377
6. Educate Consumers	378
B. Reducing the ICV Fleet	379
1. Incentives	379
2. Bans	380
V. Conclusion	383
 Chapter 15 — <i>Heavy-Duty Vehicles and Freight</i> , by Andrea Hudson Campbell, Avi B. Zevin, and Keturah A. Brown	384
I. Introduction	384
II. Overview of the HDV, Rail, and Freight Sectors	384
A. HDVs and Heavy-Duty Engines	385
B. Rail	386
C. HDV and Rail Emissions	387
III. Reducing Per-Ton GHG Emissions From HDVs	389
A. Current Efforts to Reduce GHG Emissions From HDVs	389
1. Overview of EPA and NHTSA Approaches to HDV Regulation	389
2. EPA and NHTSA Joint GHG and Fuel Efficiency Standards for HDVs and HDV Engines	390
B. Legal and Policy Options to Achieve Deep Decarbonization Objectives	393
1. Establishing Stringent, Technology-Forcing GHG and Fuel Economy Standards in Future MYs	393
2. Eliminate Statutory Constraints to Enable Aggressive GHG/Fuel Economy Standards	395
3. Clarify and Confirm Federal Authority to Regulate HD Trailers and Gliders	395
4. Accelerate the Turnover of Older, Less Fuel-Efficient HDVs	397
5. Develop Automated Vehicle Regulations That Can Achieve GHG Reductions	398
6. Federal Legislation for Autonomous Vehicles Must Reduce Obstacles to the Deployment of Automated HDVs	400
7. Tax and Other Economic Incentives Can Accelerate Deployment of More Efficient Vehicles and Engines	400
8. Utilize State SIP Process and HDV I/M Programs to Speed Deployment of More Fuel-Efficient HDVs	405

9. Private- and Public-Sector Investment in Next-Generation HDVs and Necessary Infrastructure Will Reduce Fleet GHG Emissions.....	406
IV. Reducing Emissions Per Ton From Rail.....	407
A. EPA Should Grant California’s Rulemaking Petition and Issue GHG Standards for New Locomotives Under Existing CAA Authority.....	407
B. Clean Air Act Amendments Could Accelerate the Turnover of Older, Less Fuel-Efficient Locomotives or Require Periodic Remanufacturing of In-Use Locomotives.....	408
C. Congress Should Expand and Continue Funding for EPA’s SmartWay and Clean Diesel Grants Programs.....	409
D. Congress Should Create Tax Credits for the Purchase and Deployment of New Advanced Technology and Fuel-Efficient Locomotives.....	410
E. Congress Could Amend the CAA to Allow State and Local Authorities to Regulate New Locomotives.....	410
F. Individual States or Coalitions of States Should Adopt Requirements for In-Use Locomotives Operating Within State Borders.....	411
V. Enabling and Encouraging Mode Shift From HDV to Rail.....	411
A. Legal and Policy Options for Overcoming Obstacles and Creating Opportunities for Expanded Use of Rail.....	412
1. Invest in Infrastructure and Require Technologies That Reduce Congestion and Choke Points, Allow for Double-Stacking, and Enable Efficiency.....	412
2. Expand Investment in Rail Infrastructure to Reduce Advantages of HDV Over Rail.....	415
3. Develop a More Distributed Rail System Instead of Consolidated Routes.....	416
B. Legal and Policy Options for Expanding Use of Rail Infrastructure.....	416
1. The STB Should Accelerate Approval of New Rail Lines.....	417
2. The STB Could Revise Rate Regulation to Encourage Private Investment for Expansion and Maintenance of Distributed Rail Infrastructure.....	417
3. Federal, State, and Local Governments Should Increase Investment in Freight Transportation Infrastructure.....	418
4. Congress and State Legislatures Should Revise Permitting Requirements to Reduce Project Delays.....	418
5. Federal and State Regulators Could Increase the Stringency of Trucking Regulation to Fully Account for Externalities and Reduce Price Disparity With Rail.....	419
6. Federal Regulators Should More Closely Coordinate With Foreign Counterparts at the U.S. Border.....	419
VI. Emissions Reduction Opportunities at Ports and Other Freight Terminals.....	420
A. Congress Could Provide EPA and States Additional Authority to Regulate Drayage Trucks and Cargo Handling Equipment at Freight Gateways.....	420
1. Emission Reduction Opportunities for Drayage Trucks.....	420
2. Emission Reduction Opportunities for Cargo Handling.....	421
B. Congress or State Legislatures Could Adopt Legislation Permitting Facilitywide Emissions Limits.....	421
VII. Reducing Last-Mile Delivery Emissions.....	422

VIII. Conclusion.....	422
Chapter 16 — <i>Aviation</i> , by Aoife O’Leary	424
I. Introduction	424
II. Status of Regulation of GHGs From Aviation	425
A. U.S. Aviation Emissions Are a Significant Contributor to Climate Change	425
B. History of Aviation Emissions Regulation in the United States and at the International Level ...	427
1. In the United States	427
2. At the international Level	427
C. Emissions Reduction Objective	429
D. Feasibility of Reducing Aviation Emissions	429
1. Aviation Efficiency Improvements	429
2. Biofuel Use	430
3. Operational Measures.....	430
4. Demand Reduction	431
5. Effect of New Technologies.....	431
III. U.S. Domestic Legal Options for Reducing Emissions.....	431
A. Adopt a Carbon Charge That Includes Aviation Emissions.....	431
B. Increase Taxes on Aviation	432
C. Introduce an Emissions Standard Under the CAA	432
D. Require or Encourage the Use of Biofuels	434
E. Reduce Emissions at Airports.....	434
F. The Airline Industry and Business Should Undertake Voluntary Emissions Reduction Measures	435
G. All Levels of Government Should Make Emissions Reductions a Core Goal of All Travel or Aviation-Related Policies	436
H. Enable or Encourage Less Flying	437
I. Individuals Could Purchase Very High-Quality Offsets.....	437
J. Reduce Emissions From Aviation Freight.....	437
IV. Legal Options for Implementing and Strengthening International Emissions Reduction Agreements	437
A. Adopt the ICAO CO ₂ Standard.....	438
B. Adopt CORSIA and Voluntarily Participate in It.....	439
C. Negotiate or Renegotiate Air Service Agreements With Other Countries to Allow Taxation of Fuel in International Aviation	440
D. Align the Interests of U.S. Entities Responsible for Aviation Regulation	441
E. Cooperate With Other Countries Outside of ICAO	441
F. Lead the Effort to Set Emissions Reduction Goals Under the UNFCCC	441

G. Encourage Enhanced Emissions Reductions in the Shipping Sector	442
V. Maximizing Co-Benefits.....	442
A. Reducing Noise and Air Pollution	442
B. Improving the Equity of the Climate Transition	442
VI. Conclusion.....	443
 Chapter 17 — <i>Shipping</i> , by Aoife O’Leary.....	 444
I. Introduction	444
II. Regulation of the Shipping Sector	445
A. The IMO and MARPOL.....	445
B. UNCLOS	446
1. Coastal Jurisdiction.....	447
2. Port Jurisdiction.....	447
3. Flag Jurisdiction.....	447
C. U.S. Laws Affecting Domestic Shipping	448
1. The Jones Act.....	448
2. The Maritime Security Act	449
D. Existing Regulations of Greenhouse Gas Emissions From Shipping	449
1. No Endangerment Finding for Marine Vessel Greenhouse Gases	449
2. Shipping in International Climate Agreements.....	450
3. The IMO SEEMP	450
4. The IMO EEDI	450
5. MRV in the EU and the IMO	451
6. Air Pollution Regulation in the IMO and United States.....	451
E. Potential Reductions for Shipping.....	452
1. Slow Steaming	453
2. Renewable Energy and Low-Carbon Fuels	453
3. Taxation of Emissions.....	454
F. Co-Benefits of Emissions Reductions	454
III. Analysis of the Legal Issues and Options/Pathways.....	454
A. Potential U.S. Measures Tackling Domestic and International Shipping.....	455
1. Carbon Tax or Credit System	455
2. Efficiency Trading (Proposed by the United States in the IMO).....	456
3. Endangerment Finding.....	456
4. Fuel Tax.....	456
5. The Jones Act.....	457
6. U.S. Government and State Government Procurement	457

7. Regulatory Action at the State Level.....	457
8. Actions That Ports Can Take to Reduce Emissions.....	457
9. Voluntary Industry Measures.....	458
B. IMO and UNFCCC Measures.....	459
C. Complementary Approaches.....	459
1. Reduction in Global Fossil Fuel Use.....	459
2. Limitation on Shipping in the Arctic.....	460
D. Equity.....	460
IV. Conclusion.....	460

PART V — ELECTRICITY DECARBONIZATION

Chapter 18 — <i>Utility-Scale Renewable Generating Capacity</i> , by Michael B. Gerrard.....	463
I. Introduction	463
II. The Massive Number of Needed Facilities.....	464
III. Site Acquisition and Approval.....	466
A. Federal Land.....	466
B. Offshore Wind.....	470
C. Disturbed Land.....	475
IV. NEPA.....	476
V. State and Local Approvals.....	479
VI. Species Protection Laws	482
VII. Needed Complementary Actions.....	487
A. Grid Connection and Integration.....	487
B. Subsidies and Incentives.....	487
C. Land Allocation	487
VIII. Conclusion.....	488
Chapter 19 — <i>Distributed Renewable Energy</i> , by K.K. DuVivier	489
I. Introduction	489
II. Distributed Resources—PV Solar.....	491
A. Potential DG Capacity.....	492
B. Solar-Plus-Storage	493
C. Legal Issues and Pathways for Solar PV Installation	494
1. Incentives or Mandates for Renewable Energy and Storage.....	495
2. Standardization of Permitting and Regulations.....	497
3. PUC Policies.....	500
4. Local Government or Nongovernmental Actions.....	506

III. Distributed Resources—Thermal Resources.....	508
A. Technologies	508
1. Hot Water	509
2. Space Conditioning.....	512
B. Legal Issues and Pathways for Thermal Resources.....	516
1. Federal Initiatives.....	516
2. State and Local Governmental Actions.....	516
3. Nongovernmental Actions	521
IV. Additional Issues.....	521
A. Access to Technologies and Solar Rights	521
1. Impediments to Solar Installations	522
2. Solar Access Rights	522
B. Ownership Structures.....	524
1. TPO	524
2. Community Ownership.....	525
V. Conclusion.....	526
 Chapter 20 — <i>Transmission, Distribution, and Storage: Grid Integration</i> , by Alexandra B. Klass.....	 527
I. Introduction	527
II. The Electric Transmission Grid.....	527
III. Transmission Needs for Deep Decarbonization	529
A. Deep Decarbonization Reports.....	529
B. Other Sources of Information on Deep Decarbonization, Transmission Needs, and Resource Balancing.....	530
IV. Technologies Available and Under Development for Deep Decarbonization.....	531
V. Laws Applicable to Transmission Expansion for Deep Decarbonization	534
A. State Siting and Eminent Domain Authority for Electric Transmission Lines	536
B. Limited Federal Authority Over Electric Transmission Lines.....	537
C. Other Laws That May Help or Hinder Electric Transmission Line Expansion and Efficiency... 538	
1. Demand Response and Energy Efficiency.....	538
2. Energy Storage.....	539
3. Time-of-Use Pricing.....	540
4. Energy Consumption Data Policies.....	540
VI. Potential New Public Law Approaches	540
A. Congressional Action on Electric Transmission Line Siting and Eminent Domain Authority	540
B. Federal Agency Action to Expand Interstate Electric Transmission Lines	542
C. Potential Actions by Congress, Federal Agencies, and RTOs to Facilitate New Technologies and Funding for Distribution Grid and Smart Grid Developments	542

D. State-Law Legislative and Regulatory Initiatives	543
VII. Potential Mixed Public/Private Law Approaches	544
A. Reducing Landowner Opposition to New Electric Transmission Infrastructure	544
B. The Role of Technology Development in Reducing Transmission Needs.....	545
VIII. Conclusion.....	546
 Chapter 21 — <i>Nuclear Energy</i> , by David A. Repka and Tyson R. Smith.....	547
I. Introduction: The Role of Nuclear Energy in Decarbonization.....	547
II. The Current State of Nuclear Power and Regulation.....	549
A. Advances in Nuclear Technology.....	549
B. Current Legal and Regulatory Framework.....	551
1. Federal Regulation (Safety and Environmental).....	551
2. State Regulation (Economic and Siting).....	553
III. Pathways to Preserving Currently Operating Nuclear Plants	555
A. Federal Carbon Pricing	555
B. Reforms in Competitive Energy Markets	556
C. Tax Incentives.....	558
D. NRC Second License Renewal	559
IV. Pathways to Developing New Nuclear Capacity.....	559
A. Cost Competitiveness of New Nuclear.....	560
B. Financing Capital Costs of New Reactors.....	560
C. Advanced Nuclear Technology Development and NRC Certification Costs.....	562
D. Design Standardization	563
E. NRC Licensing Costs and Regulatory Uncertainties	564
V. Pathways to Support Nuclear Deployment Based on Other Major Federal Initiatives	566
A. Large-Scale Public Nuclear Power Development.....	567
B. Nuclear Waste Policy	567
VI. Conclusions	569
 Chapter 22 — <i>Hydropower</i> , by Charles R. Sensiba, Michael A. Swiger, and Sharon L. White.....	571
I. Introduction	571
II. Overview of Hydropower Regulation and Hydropower Development Potential.....	573
A. Regulation Over Nonfederal Hydropower Under the FPA	574
B. Environmental Regulation Over Nonfederal Hydropower Under Federal Environmental Statutes	575
C. Potential for Expansion of Nonfederal Hydropower in the United States	576
1. Upgrades and Optimization of Existing Conventional Projects	576
2. New Hydropower Development at Existing Non-Powered Dams	576

3.	Low-Head Conduit Projects.....	577
4.	Pumped Storage Projects.....	578
5.	MHK Projects.....	579
6.	Preserving the Existing Fleet.....	580
III.	Resolving Impediments to Hydropower Development Through Legal Reform	580
A.	Fully Recognize Hydropower as a Renewable Energy Resource.....	581
B.	Require All Regulatory Agencies to Give “Equal Consideration” to the Climate Benefits of Hydropower in Their Licensing and Permitting Decisions	584
C.	Integrate the FERC Licensing Process With Other Regulatory Requirements and Require Greater Coordination and Schedule Discipline.....	585
D.	Promote Upgrades and Optimization of Existing Hydropower Projects Through Streamlined FERC Amendment Procedures and Jurisdictional Changes at Federal Dams.....	588
E.	Focus Licensing Requirements for New Pumped Storage Projects, Particularly Closed-Loop Systems.....	590
F.	Facilitate Development of Hydropower at Existing Non-Powered Dams Without Interfering With Existing Use of the Dams.....	591
G.	Prioritize Research and Development for MHK Technologies and Implement a Smarter Permitting Scheme.....	592
IV.	Resolving Market Impediments to Hydropower Development.....	593
V.	Conclusion.....	596
Chapter 23 —	<i>Electricity Charges, Mandates, and Subsidies</i> , by Jim Rossi.....	598
I.	Introduction	598
II.	Past and Present Policies Reinforcing Carbon Lock-In.....	599
A.	Direct and Indirect Subsidies Favoring Fossil Fuel Energy Supply	600
B.	Ratemaking and the Incumbent Power Generation Fleet.....	601
C.	Federal Policies Favoring Competitive Energy Markets.....	601
III.	Existing Mandates, Subsidies, and Retail Customer Charges That Promote Decarbonization	602
A.	Mandates to Promote Decarbonization of Electric Power.....	602
1.	State and Local RPS Mandates	602
2.	Energy-Efficiency Mandates	603
3.	Low-Carbon Vehicle Mandates.....	604
B.	Subsidies for Decarbonization of Electric Power	605
1.	Subsidies Through General Taxation	605
2.	Subsidies for Low-Carbon Infrastructure.....	605
3.	Ratepayer Subsidies for Distributed Energy Resources	607
C.	Customer Retail Energy Charges.....	607
IV.	Scaling Up the Policy Toolbox for Deep Decarbonization of Electric Power.....	609
A.	Policy Guideposts	609

B. What Role Can State and Local Governments Play?.....	610
1. RPS	610
2. Energy-Efficiency Standards.	610
3. Setting Avoided Costs.....	610
4. Net Metering and Feed-In Tariffs	610
5. Eliminate Existing Regulatory Barriers	610
6. The New Role of the Distribution Utility	611
7. Subsidies for New Infrastructure.....	611
8. Empowering Local Governments.....	611
9. Ensuring Customer Equity and Fairness.....	611
10. Regulatory Realignment	611
C. New Legislation by Congress.....	612
1. Pricing Carbon	612
2. Federal Tax Credits.....	612
3. Tax-Exempt Green Bonds	612
4. Private Financing Options.....	612
5. A National Clean Energy Standard	613
6. Funding Innovation	613
7. Strengthening PURPA.....	614
8. A Federal ZEV Mandate.....	614
9. Information Sharing.....	614
10. Requiring Agency Coordination	614
D. Federal Agencies and Deep Decarbonization of Electric Power	614
1. An EPA “Bridge” Initiative	615
2. System Benefits Rate Adders.....	615
3. Increased Attention to Power Supply Decisions by FERC.....	615
4. Nondiscrimination Principles for a Decarbonized Grid	615
5. Adoption of Policies to Promote Unbundling of Sales in Power Distribution	616
6. FERC and Grid Resource Prioritization.....	616
7. National Environmental Policy Act Review for Decarbonization	616
8. Decarbonizing PURPA.....	617
9. Encouraging State Subsidies for Decarbonized Power Supply.....	617
10. Improving Coordination	617
V. Conclusion.....	618
 Chapter 24 — <i>Phasing Out the Use of Fossil Fuels for the Generation of Electricity</i> , by Steven Weissman and Réna Kakon (with appendices by Stephen Herzenberg and Michael B. Gerrard)	 619
I. Introduction	619

II.	First, Have a Decarbonization Plan	623
III.	Create Specific Prohibitions or Limitations.....	624
	A. State Limitations on New Coal-Fired Power Plants.....	624
	1. What Some States Have Done.....	624
	2. What These and Other States Could Do.....	626
	B. Bans on the Use of Fossil Fuels.....	626
	C. Limits on GHG Emissions	626
	1. On the Federal Level.....	627
	2. On the State Level.....	628
IV.	Set an Accurate Price for Carbon-Based Generation	629
	A. Carbon Adder for Wholesale Electricity Rates	629
	B. Direct Price Effects on the State Level	630
	1. Carbon Adder.....	630
	2. Reduced Rates of Return	630
	C. Internalizing Cost Through Federal and State Environmental Regulation	631
	1. Clean Water Act: Cooling Water and §316(b).....	631
	2. Resource Conservation and Recovery Act (RCRA): Coal Combustion Residual and Subtitle C.....	632
	3. Clean Air Act: The Mercury Rule.....	632
	4. Federal and State Environmental Review Processes for Factoring in GHG Impacts	633
V.	Close, or Divest Ownership in, Government-Owned Fossil Generators	634
VI.	Conclusion.....	635
	Appendix A — Social Policies to Accelerate Fossil Fuel Phaseout, by Stephen Herzenberg.....	636
	I. Existing Policies at the Outset of the Trump Administration.....	637
	A. The POWER Initiative	637
	B. Worker Retraining	637
	C. Economic Adjustment Policies	638
	II. Federal and State Options for the Future	638
	A. Revitalizing the Economy of Coal Communities by Leveraging Local Activities and Investing More (RECLAIM) Act.....	638
	B. Active Labor Market Policies—“Universal Basic Adjustment Assistance”	638
	C. Enterprise Approaches.....	639
	D. Sectoral Approaches	640
	E. Macroeconomic Policies and Social Programs.....	641
	F. Revenue	641
	G. Build Equity Analysis Into Climate Adaptation Plans.....	641
	Appendix B — Stranded Assets, by Michael B. Gerrard.....	643
	I. Stranded Assets Problem	643

II. Recommendations	644
---------------------------	-----

PART VI — FUEL DECARBONIZATION

Chapter 25 — <i>Bioenergy Feedstocks</i> , by Blake Hudson and Uma Outka	648
I. Introduction	648
II. The Role of Bioenergy in Deep Decarbonization.....	649
A. Bioenergy Feedstocks	649
B. Legal and Policy Considerations	650
C. Legal Pathways.....	650
III. Bioenergy in the United States and in Scenarios for Deep Decarbonization	651
A. Bioenergy in the United States	651
1. Bioenergy for Transportation.....	651
2. Bioenergy for Electricity Generation	652
B. Bioenergy Feedstocks in the United States and GHG Emissions.....	652
C. Scenarios for GHG Emissions Reductions by 2050 Using Bioenergy.....	654
1. DDPP Scenarios	654
2. MCS Scenarios	654
IV. Legal and Policy Considerations, Options, and Pathways.....	655
A. Legal and Policy Considerations	656
1. Legal Issues: Federalism	656
2. Policy Choices: Balancing Competing Land Uses.....	656
B. Legal Approaches	657
1. Pathway #1: Prescriptive Land Use/Resource Management Regulation	658
2. Pathway #2: Subsidies and Other Land Use Incentives	662
3. Pathway #3: Renewable Energy Mandates.....	664
4. Pathway #4: Direct Regulation of Biofuel Feedstock Products	667
V. Conclusion.....	669
Chapter 26 — <i>Production and Delivery of Low-Carbon Gaseous Fuels</i> , by Romany M. Webb and Melinda E. Taylor.....	670
I. Introduction	670
II. What Is Renewable Gas?.....	671
A. Biogas	671
1. Biogas Source Materials	672
2. Available and Emerging Biogas Technologies.....	672
3. Biogas Cleaning and Upgrading.....	673
B. Power-to-Gas	673
1. The Electrolysis Process	673

2.	The Methanation Process.....	674
3.	Available and Emerging P2G Technologies.....	674
4.	Gas Cleaning and Upgrading.....	675
III.	Renewable Gas' Role in a Decarbonized Economy.....	675
A.	Deep Decarbonization Pathways Project Findings	675
B.	Technical Potential of Renewable Gas.....	676
C.	Utilization of Renewable Gas.....	677
D.	Greenhouse Gas Emissions Reduction Potential of Renewable Gas	677
E.	Other Benefits of Switching to Renewable Gas.....	678
IV.	Regulatory Framework for Renewable Gas Production and Delivery.....	679
A.	Regulation of Renewable Gas Production	679
B.	Regulation of Renewable Gas Delivery	679
V.	Regulatory Changes Needed to Support Renewable Gas Production and Delivery.....	680
A.	Supporting Increased Renewable Gas Use	680
B.	Lessening Barriers to Renewable Gas Production and Delivery	681
1.	Facilitating Renewable Gas System Construction	681
2.	Providing Financial Support for Renewable Gas Facility Construction.....	682
3.	Addressing Restrictions on the Use of Renewable Gas Systems for Electricity Balancing ...	683
4.	Streamlining the Permitting Process for Gas Gathering Infrastructure.....	685
5.	Facilitating Interconnection With Gas Transmission and Distribution Pipelines.....	686
6.	Ensuring Appropriate Gas Quality Standards.....	687
7.	Controlling Gas Pipeline Leaks.....	688
VI.	Conclusion.....	690
Chapter 27 — <i>Production and Delivery of Biofuels</i> , by James M. Van Nostrand		692
I.	Introduction	692
II.	Overview of Biofuels Production and Delivery	693
III.	Regulatory Approaches to Achieve GHG Reductions.....	694
A.	Federal RFS.....	695
1.	EPAAct and RFS1.....	695
2.	EISA and the Creation of RFS2	695
B.	LCFS.....	698
1.	California's LCFS.....	699
2.	Other States.....	701
IV.	Opportunities for GHG Reductions in Production and Delivery of Biofuels.....	702
A.	Regulatory Approaches and Recommended Changes	702
B.	Feedstock Transportation.....	704

C. Production of Biofuels	705
D. Fuel Transportation	708
V. Conclusions	710

PART VII — CARBON CAPTURE AND NEGATIVE EMISSIONS

Chapter 28 — <i>Carbon Capture and Sequestration</i> , by Wendy B. Jacobs and Michael T. Craig.....	713
I. Introduction	713
II. CCS Technologies, Applications, and Potential for Achieving Deep Decarbonization of the U.S. Power Sector	715
A. Potential Contribution of CCS to Reducing Carbon Dioxide Emissions.....	715
B. CCS Technologies	717
C. The Status of CCS in the United States: Laws and Projects.....	720
III. Legal Reforms Needed to Spur Widespread Capture of Carbon Dioxide	724
A. Introduction.....	724
B. Federal and State Governments Can Create Markets for Electricity Generated by CCS-Equipped Facilities	725
1. Presidential and Gubernatorial Executive Orders Can Require Governments to Procure Electricity Generated by CCS-Equipped Facilities.....	725
2. States Can Expand Their RPS to Include Low-Carbon Electricity Generated by Plants Equipped to Capture Carbon Dioxide	725
3. State Public Utility Commissions, Private Parties, and the Federal Government Can Help Stabilize and Subsidize Prices for CCS-Generated Electricity	726
C. Congress and the States Can Also Provide a Variety of More Traditional Financial Incentives to Spur Capture of Carbon Dioxide	726
1. Congress Can Allocate Additional Funds and Expand Eligibility for Federal Tax Credits ...	727
2. State Legislatures Can Provide a Number of Tax Incentives to CCS.....	728
3. State Public Utility Commissions Can Help Subsidize CCS Via Ratemaking Proceedings....	728
4. Congress Can Extend the Deadlines Applicable to the Federal Funding	729
5. Congress Can Authorize Additional Funds for Federal Loan Guarantees.....	729
D. Federal Agencies and States Can Tighten Regulatory Requirements to Spur Carbon Dioxide Capture.....	730
1. Under a New President, EPA Could Tighten the NSPS for Coal- and Natural Gas-Fired Power Plants	730
2. Under a New President, EPA Could Strengthen the CPP If It Survives Pending Reviews and Proposed Repeal.....	732
3. State Legislators and Regulators Can Impose Restrictions on Carbon Dioxide Emissions to Drive CCS	735
4. EPA Can Revise the New Source Review and Prevention of Significant Deterioration Permitting Requirements.....	736
E. Federal and State Agencies Could Streamline Permitting and Improve Interagency Coordination	737

IV.	Legal Reforms Needed to Encourage Construction of Carbon Dioxide Pipelines.....	737
A.	Introduction.....	737
B.	States and/or Regions Can Establish Pipeline Agencies.....	738
C.	DOE Can Study Repurposing and Requalifying Existing Oil or Gas Pipelines to Carry Carbon Dioxide.....	738
D.	DOE Can Resolve Uncertainties About Locations of Key Capture and Sequestration or Utilization Facilities and Jurisdictional Authority.....	739
1.	Evolving Regulatory Framework for Carbon Dioxide Pipelines.....	739
2.	Layers of Uncertainty Pose Challenges to the Development of a New Regulatory Framework for Carbon Dioxide Pipelines.....	740
E.	Regulatory Flexibility Should Be Maintained in the Near Term.....	741
V.	Legal Reforms Needed to Facilitate Sequestration of Captured Carbon Dioxide.....	742
A.	Introduction.....	742
B.	Nature of Concerns About Long-Term Liability.....	742
C.	Ownership of Pore Space.....	743
D.	Options for Managing Long-Term Liability and Costs of Geological Sequestration.....	744
1.	Congress Can Authorize the Department of the Interior and DOE to Own and Control Several Sequestration Sites.....	744
2.	Congress Can Create a Liability Trust Fund.....	744
3.	EPA Can Authorize Expanded Use of Existing Oil and Gas Reservoirs for Sequestration...	745
4.	EPA and State Governments Can Shorten the Period of Liability.....	746
5.	BLM Can Prioritize Sequestration on Some Federal Lands.....	747
6.	Congress Could Create a Regulatory Framework for Offshore Carbon Dioxide Sequestration.....	747
E.	Existing Insurers Can Expand Their Products and More Insurers Can Enter the Market.....	747
VI.	Private Actors Can Support CCS in Various Ways.....	748
VII.	Conclusion.....	748
Chapter 29	— <i>Negative Emissions Technologies and Direct Air Capture</i> , by Tracy Hester.....	749
I.	Introduction.....	749
II.	The Current Status of NETs and DAC Development.....	752
A.	Mechanical DAC.....	753
B.	Carbon Removal Via Ocean Manipulation.....	755
C.	Accelerated Weathering and Enhanced Mineral Uptake.....	756
D.	BECCS.....	756
III.	Legal Reforms Needed to Maximize Use of NETs to Achieve Deep Decarbonization by 2050.....	758
A.	Legal Permissions and Authorizations to Construct and Initiate NET Operations.....	759
1.	Environmental Impact Assessments.....	760
2.	Land Acquisition and Use Authorization.....	761

B.	Legal Permits and Compliance Obligations for Ongoing NET Operations	761
1.	Integration Into GHG Permitting and Trading	761
2.	Environmental Authorization for Commercial Products or Fuels Generated by NET Operations, Including Captured CO ₂ Streams.....	762
3.	Potential Tort Liability for Damages Proximately Caused by NETs.....	762
4.	Authorizations for Marine-Based NETs.....	763
C.	Legal Obligations Arising From NET Wastes and Emissions	764
1.	Managing and Disposing of Captured CO ₂	764
2.	Managing and Disposing of Residues and Emissions From the NET Process Itself.....	765
IV.	New Public Law Approaches to Expedite Deployment of NETs for Deep Decarbonization.....	766
A.	Provide a Clear Statutory and Regulatory Endorsement of CO ₂ Removal as a Desired Goal of U.S. Environmental Policy	766
B.	Provide Public Support and Investment for Basic Research Into the Feasibility and Cost-Effectiveness of NETs.....	766
C.	Environmental Permits, Reviews, and Authorizations	767
D.	Integration With State Renewable Energy Incentives and Portfolio Standards.....	768
1.	Damages and Liability	768
2.	Incentives.....	768
V.	Conclusion.....	770
Chapter 30 — <i>Agriculture</i> , by Peter H. Lehner and Nathan A. Rosenberg.....		772
I.	Introduction	772
II.	Agriculture’s Role in Deep Decarbonization.....	773
A.	Greenhouse Gas Emissions in the Food System	773
B.	Reducing Net Emissions From Agriculture.....	774
1.	Greenhouse Gas Emissions From Agriculture.....	774
2.	Soil Carbon Sequestration by Agriculture	775
C.	Agricultural Practices for Reducing Greenhouse Gas Emissions.....	776
1.	Introduction.....	776
2.	Cropland.....	777
3.	Grazing Land.....	786
4.	Animal Feeding Operations.....	788
D.	Agriculture’s Maximum Possible Contribution to Reducing Carbon.....	792
III.	Public Law Pathways to Reducing Net Agricultural Greenhouse Gas Emissions.....	793
A.	Research, Development, and Extension Programs.....	794
1.	Research and Development	794
2.	Extension Service	797
3.	Coordinating Research, Development, and Extension	799

B.	Public Subsidy and Conservation Programs.....	799
1.	Crop Insurance	799
2.	Commodity Programs	801
3.	Conservation Payments	802
4.	Conservation Easements.....	805
5.	Conservation Compliance Requirements	806
6.	Renewable Fuel Standard Grassland Conservation Compliance	806
7.	Transforming the Farm Safety Net Through Legislative Action.....	807
C.	Trade Policy.....	809
D.	Tax Policy.....	809
E.	Regulatory Options.....	810
F.	Financing Options	812
G.	Grazing Practices on Government Land.....	813
H.	Greenhouse Gas Pricing.....	814
IV.	Non-Public Law Approaches to Reducing Net Agricultural Emissions	814
A.	Research.....	814
B.	Financing Options	815
C.	Measuring Carbon Content in Above-Ground Biomass and Soil.....	815
D.	Easements and Other Conservation Tools	816
E.	Offset Markets.....	816
V.	Reducing Food System Emissions	817
A.	Upstream: Greenhouse Gas Emissions From Farm Inputs	817
1.	Reduce Emissions From Fertilizer Production	817
2.	Promulgate Fuel Economy Standards for Agricultural Equipment and Reduce On-Farm Energy Use	818
B.	Downstream: Emissions From Food Processing, Packaging, Marketing, and Waste.....	818
1.	Reducing Processing, Packaging, Distribution, and Marketing Emissions	818
2.	Divert Food From Landfills	818
VI.	Changing Consumption Patterns	820
A.	Integrate Greenhouse Gas Emissions Into Dietary Guidelines.....	820
B.	Prioritize Climate Change Mitigation in Procurement Contracts	821
C.	Private Sector Strategy	821
1.	Create a Certification System.....	821
2.	Expand Restaurant Menu Options	821
VII.	Conclusion.....	822

I.	Introduction—Forests, Forestry, and Deep Decarbonization.....	823
II.	U.S. Climate Forestry—Background	825
	A. Forests and Climate Change Mitigation.....	826
	B. Forests and the Failure to Act.....	829
III.	Thinking About Legal Pathways	830
IV.	Legal Pathways—Climate Change and the National Forests.....	831
	A. Existing Laws and Policies	831
	B. Recommendations	833
V.	Legal Pathways—Climate Change and State Forests.....	835
	A. Existing Laws and Policies	835
	B. Recommendations	837
VI.	Legal Pathways—Climate Change and Private and Local Government Forestlands.....	837
	A. Federal Support	837
	B. State Forest Practices Laws.....	838
	C. Forest Offsets in Cap-and-Trade Systems	839
	D. State Programs Encouraging Substitution of Sustainably Produced Biomass for Fossil Fuel.....	839
	E. Local Government Action	840
	F. Private Forest Certification	841
	G. Land Conservation and Carbon Capture.....	841
	H. Land Conservation Tax Incentives.....	842
	I. Recommendations	843
VII.	Conclusion.....	844

PART VIII — NON-CARBON DIOXIDE CLIMATE POLLUTANTS

Chapter 32 —	<i>Black Carbon</i> , by Melissa Powers	846
I.	Introduction	846
II.	Black Carbon’s Climate Impacts and Recommended Emissions Reduction Objectives.....	848
	A. Black Carbon and Climate Change.....	848
	B. Technologies to Reduce Black Carbon	850
	C. Black Carbon Reduction Objectives.....	851
	1. Transportation Sector Emissions.....	851
	2. Energy/Power/Industrial Sources.....	851
	3. Residential Sources.....	851
	4. Open Biomass.....	851
III.	Strategies to Reduce Black Carbon Emissions From the Transportation Sector	852
	A. An Overview of the CAA	852
	B. An Overview of the CAA’s Mobile Source Programs.....	853

1. Vehicle and Engine Emission Standards	853
2. In-Use Standards.....	854
C. Federal Mobile Source Standards	854
1. Federal Vehicle Emission Standards—On-Road Vehicles.....	854
2. Federal Vehicle Emission Standards—Nonroad Sources	856
3. Federal Regulation of Engine Retrofits.....	857
4. Recommendations for Strengthening Federal Standards.....	857
D. State Mobile Source Standards.....	859
1. The California Waiver	859
2. California’s Emission Standards	859
3. Other States’ Emission Standards	860
4. Recommendations	860
E. In-Use Regulation Through SIPs and State and Local Laws.....	861
1. Regulation Consistent With SIPs	861
2. Additional State and Municipal Regulations	864
3. Constitutional Limits on State and Local Regulations	865
4. Recommendations	866
F. Voluntary Programs and Funding Mechanisms.....	867
1. Voluntary Federal Diesel Reduction Programs.....	867
2. Voluntary State Reduction and Funding Programs.....	869
3. The Volkswagen Settlement	869
4. Recommendations	870
G. Maximizing Environmental, Social, and Economic Co-Benefits	871
IV. Reducing Black Carbon Emissions From Stationary Sources.....	871
A. Stationary Source Programs for New and Modified Sources.....	871
B. Stationary Source Controls for Existing Sources	872
C. Recommendations.....	874
V. Strategies to Reduce Black Carbon Emissions From Residential Sources.....	874
A. Laws, Policies, and Programs to Reduce Black Carbon Emissions.....	875
B. Recommendations.....	875
VI. Strategies to Reduce Black Carbon Emissions From Open Biomass Burning	876
A. Open Burning Considerations.....	876
B. Laws and Policies to Limit Emissions of Open Burning.....	877
C. Recommendations	877
VII. Conclusion.....	878

I.	Introduction	879
II.	Methane as a Potent GHG.....	880
	A. Methane’s Contribution to Climate Change.....	881
	B. Sources of Methane Emissions in the United States.....	881
	C. Capturing Methane for Use as an Energy Source	882
III.	Methane Capture in the Fossil Fuel Sector.....	882
	A. Methane Emissions From Natural Gas and Petroleum Systems	882
	1. Reducing Emissions From Oil and Gas Production	883
	2. Reducing Emissions From the Transportation of Gas.....	886
	B. Coal Mine Methane Emissions	889
	1. Federal Regulation of Coal Mine Emissions.....	890
	2. State Regulation of Coal Mine Emissions	890
IV.	Methane Capture in the Agriculture Sector	890
	A. Methane Emissions From Enteric Fermentation	891
	1. Supporting Low-Emission Livestock Production.....	891
	2. Encouraging Reduced Livestock Consumption and Production.....	892
	B. Methane Emissions From Manure Management.....	892
	1. Providing Funding for Improved Manure Management.....	893
	2. Enhancing Access to Markets for Manure Management Byproducts.....	893
	3. Regulation of Manure Management Emissions.....	894
V.	Methane Capture in the Waste Management Sector.....	895
	A. Landfill Methane Emissions	895
	1. Methane Capture	895
	2. Voluntary Programs Supporting Landfill Gas Capture.....	896
	3. Regulation of Landfill Emissions.....	896
	B. Sewage Treatment Methane Emissions.....	898
	1. Voluntary Programs Supporting Gas Capture at Wastewater Treatment Facilities	899
	2. Regulation of Wastewater Treatment Facility Emissions	900
VI.	Conclusion.....	900
Chapter 34	— <i>Fluorinated Gases</i> , by Nathan Borgford-Parnell, Stephen Oliver Andersen, and Durwood Zaelke.....	902
I.	Introduction	902
II.	HFCs and the Growing Threat to the Climate.....	904
III.	International Law Context.....	906
IV.	Federal Regulatory and Policy Instruments for Controlling HFC Use and Emissions	907
	A. The National Recycling and Emission Reduction (NRER) Program	907
	B. The SNAP Program.....	907

- C. The Federal Acquisition Regulation (FAR)..... 908
- D. MAC Credits Under Federal Corporate Average Fuel Economy (CAFE) Standards..... 909
- E. The Green Proving Ground (GPG) Program 909
- F. The GreenChill Partnership 909
- G. The RAD Program 909
- V. Federal Legal Pathways for Scaling Up the Decarbonization Benefits of HFC Emissions Reductions..... 909
 - A. Congress Should Amend Title VI of the CAA to Cover HFCs..... 910
 - B. EPA or the States Should Eliminate Unnecessary DIY Emissions From Mobile Air-Conditioning 910
 - C. Congress Should Levy an Excise Tax on HFCs..... 910
- VI. Subnational and Private Controls on HFC Use and Emissions..... 910
 - A. Subnational Climate Legislation and Executive Action..... 910
 - B. Subnational Green Purchasing Programs 912
- VII. Subnational and Private Legal and Policy Pathways for Scaling Up the Decarbonization Benefits of HFC Emissions Reductions..... 912
 - A. All States Should Consider Passing Legislation Similar to California’s S.B. 605 on SLCPs..... 912
 - B. Form “Buyer’s Clubs” and Harmonize Sustainable/Green Purchasing Programs With the SNAP List of Chemicals..... 912
 - C. Join the GSA’s GPG Program or Develop Similar Programs to Spur Innovation and Deployment of New Clean Technologies..... 913
- VIII. Recommendations on Catalyzing Simultaneous HFC Emissions Reductions and Improving Energy Efficiency..... 913
 - A. The Federal Government and State Governments Should Use Life-Cycle Climate Performance (LCCP) Accounting in Their Energy-Efficiency Programs and Regulations..... 913
 - B. The Federal Government, State Governments, and Voluntary Certification Programs Should Restrict Use of HFCs in Building Efficiency and Certification Programs 913
 - C. Utilities Should Include Low-GWP Refrigerants in Their Energy-Efficiency Incentive Programs..... 914
- IX. Overcoming Barriers to the Introduction of Low-GWP Refrigerant Alternatives and the HFC Phasedown..... 914
- X. Conclusion..... 915

- Chapter 35 — *Nitrous Oxide*, by Jessica Wentz and David Kanter..... 916
 - I. Introduction 916
 - II. Background: U.S. Nitrous Oxide Emissions and Abatement Options 917
 - A. Key Sources of Nitrous Oxide Emissions in the United States..... 918
 - B. Existing Regulation..... 920
 - C. Mitigation Potential for Nitrous Oxide Source Categories 920
 - 1. Agricultural Soil Management and Manure Management..... 921

2. Stationary and Mobile Combustion	925
3. Nitric and Adipic Acid Production	926
III. Legal Pathways to Reduce U.S. Nitrous Oxide Emissions.....	926
A. The CAA.....	927
1. Title VI—Stratospheric Ozone Protection	927
2. Section 111—Stationary Source Performance Standards	930
3. Section 202—Mobile Source Controls	932
4. Section 115—International Air Pollution	932
5. Recommendations for CAA Regulation.....	933
B. Reducing Nitrous Oxide Emissions Through Cap and Trade	933
1. Nitrous Oxide in Existing Cap-and-Trade Programs	934
2. Design Considerations	934
3. Recommendations for Cap-and-Trade Programs	935
C. State and Local Approaches	936
D. Other Approaches: Incentives, Technical Support, and Private Governance.....	937
1. Recommendations for Incentives, Technical Support, and Private Governance	938
IV. Conclusion.....	939
 Index of Recommendations Organized by Actor	 940
 Index	 1041
